                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
Polynucleotides encoding diacylglycerol acetyltransferase, useful for
synthesis of triacylglycerols and increasing the level of oils in plant
                                                                                                                              In the present invention, cDNA libraries from Arabidopsis, corn, rice, soybean and wheat were screened for sequences with homology to a putative acyl COA cholesterol acyltransferase related gene from Arabidopsis thallana and diacylglycerol acyltransferase from Homo sapiens and Mus musculus. The CDNA clones identified from this process were used to form complete diacylglycerol acyltransferase CDNA sequences. The present sequence is corn diacylglycerol acyltransferase cDNA from clone cpilc.pk005.h3. Diacylglycerol acyltransferase are involved in the synthesis of triacylglycerols. Alteration of the expression of the diacylglycerol acyltransferases are increasing the level of oils in plant seeds. Inhibitors of diacylglycerol acyltransferase may be useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ::: ||| :: ||| ::31 ATCACAAGCGCGCAAGAAGGTTGAAATTTACAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             In the present invention, cDNA libraries from Arabidopsis, corn, rice, soybean and wheat were screened for sequences with homology to a putative acyl CoA cholesterol acyltransferase related gene from Arabidopsis thaliana and diacylglycerol acyltransferases from Homo sapiens and Mus musculus. The cDNA clones identified from this process were used to form complete diacylglycerol acyltransferase cDNA sequences. The present sequence is wheat diacylglycerol acyltransferase cDNA from clone wrl.pk0119 b6:fis. Diacylglycerol acyltransferases are involved in the synthesis of triacylglycerols. Alteration of the expression of the diacylglycerol acyltransferase DNA can be useful for increasing the level of oils in plant seeds. Inhibitors of diacylglycerol acyltransferase may be useful as

In the present invention, cDNA libraries from Arabidopsis, corn, rice, soybean and wheat were screened for sequences with homology to a putative acyl CoA cholesterol acyltransferase related gene from Arabidopsis thaliana and diacylglycerol acyltransferases from Homo sapiens and Mus musculus. The CDNA clones identified from this process sequences. The present sequence is rice diacylglycerol acyltransferase CDNA cDNA from clone ris24.pk0034.d8:fis. Diacylglycerol acyltransferases are involved in the synthesis of triacylglycerols. Alteration of the expression of the diacylglycerol acyltransferase are involved in the synthesis of acyltransferase and acylcipla acyltransferase and acylglycerol acyltransferase are increasing the level of oils in plant seeds. Inhibitors of diacylglycerol acyltransferase may be useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MetalalleLeuAspSer---AlaGlyValThrThrValThrGluAsnGlyGlyGlyGlu 19
                                                                                                                                                    Polynucleotides encoding diacylglycerol acetyltransferase, useful for synthesis of triacylglycerols and increasing the level of oils in plant
                                                                                                                                                                                                                                  soybean and wheat were screened for sequences with homology to a putative acyl CoA cholesterol acyltransferase related gene from Arabidopsis thaliana and diacylglycerol acyltransferases from Homo saplens and Mus musculus. The CDNA clones identified from this process were used to form complete diacylglycerol acyltransferase cDNA sequences. The present sequence is soybean diacylglycerol acyltransferase are involved in the synthesis of triacylglycerol Alteration of the expression of the diacylglycerol acyltransferases are involved in the synthesis of triacylglycerols. But can be useful for increasing the level of oils in plant seeds. Inhibitors of diacylglycerol acyltransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ------AAACAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This DNA encodes Arabidopsis thaliana ecotype Columbia mutant ASII diacylglycerol acyltransferase (DGAT). The ASII mutant TAGI allele has a 147 bp insertion located at the central region of intron 2. The insertion is a duplication of a segment that is composed of 12 bp from the 3' end of intron 1, the entire sequence of exon 2 (81 bp) and 54 bp from the 5' end of intron 2. The DGAT and the insertion mutant (ASII) are useful for regulating seed oil content, the ratio of diacylglycerol to triacylglycerol proportions in seed oil, fatty acid synthesis, seed oil acyl composition, seed size/weight and carbon flux into other seed acyl commercial and crop plants. The natural formation of triacylglycerols can be modified to increase the yield in commercial improvements of plants and plant products.

(CANA) NAT RES COUNCIL CANADA.	or DC, Wei Y, Jako CC;	592/37. 853.	line Alexania income and construction from healtheath	hem ban encounny diacytylycerol acylliansierase from Atablachsis thaliana for transforming plants and requiating seed oil content, fatty	acid synthesis and seed oil acyl composition in commercial and crop plants		Claim 2; Page 67-68; 91pp; English.	This DNA encodes Arabidopsis thaliana diacylglycerol acyltransferase	MGAT and an insertion mutant (ASil) are useful for regulating	seed oil content, the ratio of diacylglycerol/triacylglycerol proportions	in seed oil, ideal aginemests, seed oil act composition, seed size/weight and carbon flux into other seed components in commercial and	crop plants. The natural formation of triacylglycerols can be modified to	yield in commercial plant oils or modify their composition	to achieve specific commercial improvements of plants and plant products.                                                                                                                                                                                                                                                                                                                                This cDNA encodes Arabidopsis thaliana ecotype Columbia mutant ASII diacylglycerol acyltransferase (DGAT). The ASII mutant TAGI allele has a 147 bp insertion located at the central region of intron 2. The insertion is a duplication of a segment that is composed of 12 bp from the 3' end of intron 1, the entire sequence of exon 2 (81 bp) and 54 bp from the 5' end of intron 2. The DGAT and the insertion mutant (ASII) are useful for regulating seed oil content, the ratio of diacylglycerol to triacylglycerol proportions in seed oil, fatty acid synthesis, seed oil acylglycerol proportions in seed oil, fatty acid synthesis, seed oil acylglycerols can be modified to increase the yield in commercial plant oils or modify their composition to achieve specific commercial improvements of plants and plant products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                198

       In the present invention, cDNA libraries from Arabidopsis, corn, rice, soybean and wheat were screened for sequences with homology to a putative acyl COA cholesterol acyltransferase related gene from Arabidopsis thaliana and diacylglycerol acyltransferases from Homo sapiens and Mus musculus. The cDNA clones identified from this process were used to form complete diacylglycerol acyltransferase cDNA sequences. The present sequence is Arabidopsis thaliana diacylglycerol acyltransferase are involved in the synthesis of triacylglycerol acyltransferases are involved in the diacylglycerol acyltransferase involved of the diacylglycerol acyltransferase involved increasing the level of oils in plant seeds. Inhibitors of diacylglycerol acyltransferase may be useful as herbicides.

```
The present sequence encodes an acyl-CoA:cholesterol acyltransferase
(ACAT) related protein. The ACAT-like protein is active in the formation
of a sterol, ester and/or triacylglycerol from a fatty acyl-CoA and
sterol and/or diacylglycerol substrate. The DNA can be used for
modifying the lipid composition of plant cells. The ACAT-like protein
thas diacylglycerol acyltransferase (DACAT) activity, and so the
synthesis of triglycerides can be "suppressed or increased using the
DNA. The protein can be used to produce plant oils with a modified
triglyceride content. The products can also be used to identify
antagonists and agonists of DAGAT activity. Such agonists and
antagonists are particularly useful in treating or ameliorating
antagonists are particularly useful in treating or ameliorating
with altered celular diacylglycerol concentration or PKC activity,
including cancer, diabetes, cardiopulmonary diseases associated
with altered celular diacylglycerol concentration or PKC activity,
including cancer, diabetes, cardiopulmonary diseases e.g. heart failure,
atherosclerosis, adipocytosis, leukaemia, skin carcinoma, fibroblastoma,
metabolism, and diseases associated with abnormal lipid
metabolism, and diseases associated with abnormal inpid
Novel polynucleotides used for modifying plant oil composition and for developing products for treating e.g. cancer, diabetes, cardiopulmonary disease or metabolic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1942

Genetically engineering the biosynthetic pathways in plants involved in the accumulation of sterol compounds and tocopherol to produce. compounds for lowering the level of low density lipoprotein cholesterol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of Arabidopsis thaliana DNA encoding acyl CoA:cholesterol acyltransferase (ACAT, see AAB19740). Sterol O-acyltransferases auch as ACAT catalyse the formation of cholesterol esters from cholesterol and long chain fatty acids. Cholesterol esters from cholesterol and long chain fatty acids. Recombinant constructs of the invention are used to alter the biosynthesis and accumulation of sterols and tocopherols in transgenic plants. Seeds of such plants may contain elevated reduced levels of campesterol and campestanol and their esters. The seeds may also contain the novel sterol brassicastanol. Oil contain the novel sterol brassicastanol. Oil containthe from the seeds can be used in food and pharmaceutical compositions to lower levels of low density lipoprotein cholesterol in blood serum. ACAT enzymes can be used in the present invention to produce elevated levels of phytosterol and/or phytostanol esters.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  B;

                                                                                                                                                                                                            This cDNA encodes Arabidopsis thaliana diacylglycerol acyltransferase (DGAT). The DGAT and an insertion mutant (AS11) are useful for regulating seed oil content, the ratio of diacylglycerol/triacylglycerol proportions in seed oil, fatty acid synthesis, seed oil acyl composition, seed size/weight and carbon flux into other seed components in commercial and crop plants. The natural formation of triacylgrerols can be modified to increase the yield in commercial plant oils or modify their composition to achieve specific commercial improvements of plants and plant products.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.

the accumulation of sterol compounds and tocopherol to produce
compounds for lowering the level of low density lipoprotein cholesterol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Grebenok RJ;
Karunanandaa B;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    acyltransferase (ACAT), as deduced from ACAT DNA (see AAA88846). Sterol O-acyltransferases such as ACAT catalyse the formation of cholesterol esters from cholesterol and long chain fatty acids. Recombinant constructs of the invention are used to alter the biosynthesis and accumulation of sterols and tocopherols in transgenic plants. Seeds of such plants may contain elevated levels of sitostanol and/or its esters, and alpha-tocopherol. The seeds may also contain the novel sterol brassicastanol oil obtained from the seeds can be used in food and pharmaceutical compositions to lower levels of low density lipoprotein cholesterol in blood serum. ACAT enzymes can be used in the present invention to produce elevated levels of phytosterol and/or phytostanol esters.
                                                                                                                                                                                                                                                                                              tocopherol; phytosterol; phytostanol; anticholesterolemic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        27.9%; Score 773.5; DB 21; Length 500; 37.5%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           11 VSYAHTNYDIRVLSKSTEKGAAYGNYVDPENMKDPTFKSLVYFMLAPTLCYQPTYPQTTC 70
                                                                                                                                                                                                                                                                                 Polynucleotides encoding diacylglycerol acetyltransferase, useful for synthesis of triacylglycerols and increasing the level of oils in plant
                                                                                                                                                                                                                                                                                                                                                                                                                              In the present invention, cDNA libraries from Arabidopsis, corn, rice, soybean and wheat were screened for sequences with homology to a putative acyl COA cholesterol acyltransferase related gene from Arabidopsis thaliana and diacylglycerol acyltransferases from Homo sapiens and Mus musculus. The CDNA clones identified from this process were used to form complete diacylglycerol acyltransferase cDNA sequences. The present sequence is corn diacylglycerol acyltransferase protein, derived from a contig of clones p0042.cspaf49r, p0122.ckamb57r and p0125.czaau61rb. Diacylglycerol acyltransferases are involved in the synthesis of triacylglycerols. Alteration of the expression of the diacylglycerol acyltransferase bNA can be useful for increasing the level of oils in plant seeds. Contact of diacylglycerol acyltransferase may be useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            6

The enzyme acyl Coenzyme A-cholesterol acyltransferase 1 (ACATI) mediates sterol esterification, an important component of intracellular lipid homeostasis. The present sequence is human ACAT Related Gene Product 1 (ARGPI). This enzyme is a diacylglycerol acyltransferase (DGAT). This enzyme is a diacylglycerol acyltransferase (DGAT). This participates in the Coenzyme A-dependent acylation of substrate(s) other than cholesterol e.g. diacylglycerol. Also, ARGPI has a predicted acylation in triglyceride blosynthesis. ARGPI gene and protein are useful for treating a subject who has an imbalance in triglyceride levels due to a defect in esterification of diglycerol, via gene therapy. Particularly, atherosclerosis, heart disease, obesity or other diseases associated with high or excessive levels of triglyceride.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                272 RIRKRFLLRRILEMLFFTQLQVGLIQQMMVPTIQNSMKPFK-DMDYSRIJERLLKLAVPN 330

saplens and Mus musculus. The cDNA clones identified from this process were used to form complete diacylglycerol acyltransferase CDNA sequences. The present sequence is corn diacylglycerol acyltransferase protein derived from clone cpilc.pk005.h23. Diacylglycerol acyltransferases are involved in the synthesis of triacylglycerols. Alteration of the expression of the diacylglycerol acyltransferase DNA can be useful for increasing the level of oils in plant seeds. Inhibitors of diacylglycerol acyltransferase may be useful as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               soybean and wheat were screened for sequences with homology to a putative acyl CoA cholesterol acyltransferase related gene from Arabidopsis thaliana and diacylglycerol acyltransferases from Homo sapiens and Mus musculus. The cDNA clones identified from this process were used to form complete diacylglycerol acyltransferase cDNA sequences. The present sequence is wheat diacylglycerol scyltransferase protein, derived from clone wil.pkoli9.b6:is. Diacylglycerol acyltransferases are involved in the synthesis of triacylglycerols. Alteration of the expression of the lateylglycerol acyltransferase DNA can be useful for increasing the level of oils in plant seeds. Inhibitors of diacylglycerol acyltransferase may be useful
                                                                                                                                                                                                                                                                                                                                                                               Polynucleotides encoding diacylglycerol acetyltransferase, useful for
synthesis of triacylglycerols and increasing the level of oils in plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               246 QSIEKGATHGSSIDEENIKGPTINSVVYFMLAPTLCYQPSYPRTAFIRKGWVTRQLIKCV

Polynucleotides encoding diacylglycerol acetyltransferase, useful for synthesis of triacylglycerols and increasing the level of oils in plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      soybean and wheat were screened for sequences with homology to a putative acyl CoA cholesterol acyltransferase related gene from Arabidopsis thaliana and diacyldycerol acyltransferases from Homo sapiens and Mus musculus. The CDNA clones identified from this process were used to form complete diacylglycerol acyltransferase CDNA sequences. The present sequence is corn diacylglycerol acyltransferase protein, derived from a contig of clones cpilo.pk005.h23, cen3n.pk010.c10, ccol.pk0029.b6. Diacylglycerol acyltransferases are involved in the synthesis of triacylglycerols. Alteration of the expression of the diacylglycerol acyltransferase DNA can be useful for increasing the level of oils in plant seeds. Inhibitors of diacylglycerol acyltransferase may be useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      In the present invention, cDNA libraries from Arabidopsis, corn, rice,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    371
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 350
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         431
                                                                                                                                                                                                                                                                                                                     In the present invention, cDNA libraries from Arabidopsis, corn, rice, soybean and wheat were screened for sequences with homology to a putative acyl COA cholesterol acyltransferase related gene from Arabidopsis thaliana and diacylglycerol acyltransferases from Homo sapiens and Mus musculus. The cDNA clones identified from this process were used to form complete diacylglycerol acyltransferase CDNA acyltransferase protein, derived from clone ris24 pk0034.d8:fis. Diacylglycerol acyltransferases are involved in the synthesis of ritacylglycerols. Alteration of the expression of the diacylglycerol acyltransferase bNA can be useful for increasing the level of olls in plant seeds. Inhibitors of diacylglycerol acyltransferase may be useful as herbicides.
                                                                                                                                                                               Polynucleotides encoding diacylglycerol acetyltransferase, useful for
synthesis of triacylglycerols and increasing the level of oils in plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SYDIRSLANAADKANPEVSYY - - - - - VSLKSLAYFMVAPTLCYQPSYPRSACIRKGWV

This is the Arabidopsis thaliana ecotype Columbia ASII insertion mutant diacylglycerol acyltransferase (DGAT). The ASII mutant TAGI allele has a 147 bp insertion located at the central region of intron 2. The insertion is a duplication of a segment that is composed of 12 bp from the 3' end of intron 1, the entire sequence of exon 2 (81 bp) and 54 bp from the 5' end of intron 2. The DGAT and the insertion mutant (ASII) are useful for regulating seed oil content, the ratio of diacylglycerol to triacylglycerol proportions in seed oil, fatty acid synthesis, seed oil triacylglycerol proportions in seed oil, fatty acid synthesis, seed oil acylglycerols commercial and crop plants. The natural formation of triacylglycerols can be modified to increase the yield in commercial improvements of plants and plant products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

                                                                                                              453
                                                                                                                                            480
                                                                                                                                                                                     In the present invention, cDNA libraries from Arabidopsis, corn, rice, soybean and wheat were screened for sequences with homology to a putative acyl CoA cholesterol acyltransferase related gene from Arabidopsis thaliana and diacylglycerol acyltransferases from Homo sapiens and Mus musculus. The cDNA clones identified from this process were used to form complete diacylglycerol acyltransferase cDNA sequences. The present sequence is soybean diacylglycerol acyltransferase protein, derived from clone srl.pk0098.a8 Diacylglycerol acyltransferases are involved in the synthesis of triacylglycerols. Alteration of the expression of the diacylglycerol acyltransferase DNA can be useful for increasing the level of oils in plant seeds. Inhibitors of diacylglycerol acyltransferase may be useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Polynucleotides encoding diacylglycerol acetyltransferase, useful for synthesis of triacylglycerols and increasing the level of oils in plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
otides encoding diacylglycerol acetyltransferase, useful for of triacylglycerols and increasing the level of oils in plant
                                                                                                                                           soybean and wheat were screened for sequences with homology to a putative acyl CoA cholesterol acyltransferase related gene from Arabidopsis thaliana and diacylalycerol acyltransferases from Homo sapiens and Mus musculus. The cDNA clones identified from this process were used to form complete diacylalycerol acyltransferase cDNA sequences. The present sequence is Arabidopsis thaliana diacylalycerol acyltransferase protein, derived from clone arabber. Diacylalycerol acyltransferases are involved in the synthesis of triacylalycerols. Alteration of the expression of the diacylalycerol acyltransferase by a constant for increasing the level of oils in plant seeds. Inhibitors of diacylalycerol acyltransferase may be useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           121 PLSSDAIFKQSHAGLFNLCVVVLIAVNSRLIIENLMKYGWLIRTDFWFSSRSLRDWPLFM

The present sequence represents an acyl-CoA:cholesterol acyltransferase (ACAT) related protein. The ACAT-like protein is active in the formation of a sterol, ester and/or triacylglycerol from a fatty acyl-CoA and sterol, ester and/or triacylglycerol from a fatty acyl-CoA and adversal and/or diacylglycerol substrate. The DNA can be used for has diacylglycerol substrate. The DNA can be used for has diacylglycerol acyltransferase (DAGAT) activity, and so the synthesis of triglycerides can be suppressed or increased using the DNA. The protein can be used to produce plant oils with a modified triglyceride content. The products can also be used to identify antagonists are particularly useful in treating or ameliorating antagonists are particularly useful in treating or ameliorating diseases associated with DAGAT activity, including diseases associated with altered cellular diacylglycerol concentration or PKC activity, including cancer, diabetes, cardopulmonary diseases e.g. heart failure, atherosclerosis, adipocytosis, leukaemia, skin carcinoma, fibrobiastoma, metabolism, and diseases associated with abnormal inpid metabolism, and diseases associated with abnormal fat absorption,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

The piecenic sequence represents Associated and present sequence represents Associated acyltransferase-like (ACAT). Several novel polynucleotides encoding the plant sterol acyltransferases LCAT (lecithin:cholesterol acyltransferase-like; AsSOBIOH4, AASOBI341)

(lecithin:cholesterol acyltransferase-like; AsSOBIOH4, AASOBI341)

C (lecithin:cholesterol acyltransferase-like; AsSOBI342)

C reading frame, LROI gene sequence (AASOBI342), and a rat ACAT (AASOBI341)

C reading frame, LROI gene sequence (AASOBI342), and a rat ACAT (AASOBI05)

C C RACAT are used to produce LCAT or ACAT polypeptides. They can also or ACAT plant. The recombinant construct is used to increase or decrease the sterol content of the host cell or plant. It can be used to alter oil production of the cell or plant, preferably by increasing it.

C The oil of the plant or the plant itself is used as a food product, or as nutritional or dietary supplements, or in pharmaceutical compositions

C for lowering cholesterol. The oil can be used in foods e.g. margarine, chostery concessed meat, pasta, sauces, cereals desserts, dips, chips, chose baked goods, pastries, cookies, sanck bars, confections, chocolates, and because the also

This is an Arabidopsis thaliana diacylglycerol acyltransferase (DGAT). The DGAT and an insertion mutant (ASII) are useful for regulating seed oil content, the ratio of diacylglycerol/triacylglycerol proportions in seed oil, fatty acid synthesis, seed oil acyl composition, seed size/weight and carbon flux into other seed components in commercial and crore plants. The natural formation of triacylgycerols can be modified to increase the yield in commercial plant oils or modify their composition to achieve specific commercial improvements of plants and plant products.
                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             420

                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                 levels of sitostanol and/or its esters, and alpha-tocopherol, and reduced levels of campesterol and campestanol and their esters.

The seeds may also contain the novel sterol brasslcastanol. Oil obtained from the seeds can be used in food and pharmaceutrical compositions to lower levels of low density lipoprotein cholesterol in blood serum. ACAT enzymes can be used in the present invention to produce elevated levels of phytosterol and/or phytostanol esters.
                                                                                                       The present sequence is that of Arabidopsis thaliana acyl COA:cholesterol acyltransferase (ACAT), as deduced from a full-length ACAT DNA sequence (See AAA88835). Sterol o-acyltransferases such as ACAT catalyse the formation of cholesterol esters from cholesterol and long chain fatty acids. Recombinant constructs of the invention are used to alter the blosynthesis and accumulation of sterols and tocopherols in transgenic plants. Seeds of such plants may contain elevated
                                                                                                                                                                                                                                                                                                                                                                                                                                .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                     In the present invention, cDNA libraries from Arabidopsis, corn, rice, soybean and wheat were screened for sequences with homology to a putative acyl CoA cholesterol acyltransferase related gene from Arabidopsis thallana and diacylglycanol acyltransferases from Homo sapiens and Mus musculus. The CDNA clones identified from this process were used to form complete diacylglycerol acyltransferase CDNA sequences. The present sequence is Arabidopsis thallana diacylglycerol acyltransferase protein. This sequence was used for homology Comparison with the novel diacylglycerol acyltransferases. Diacylglycerol acyltransferases blacylglycerol acyltransferase of the acylcanol diacylglycerol acyltransferase of acyltransferase blacylglycerol acyltransferase blacylglycerol acyltransferase blacylglycerol acyltransferase may be useful but seeds. Inhibitors of diacylglycerol acyltransferase may be useful
